

The AI story production workspace

ScreenWeaver helps creators turn a screenplay into a structured visual production plan — connecting script, story architecture, storyboard, references, and AI-ready prompts in one workspace.

WHAT SCREENWEAVER DOES

- Screenwriting workspace with industry-standard formatting, outline, and story structure
- Visual story architecture connecting beats, characters, locations, and references
- Storyboard generation to see rhythm, framing, and emotional flow
- Scene-aware production preparation with prompt and scene logic for image and video tools
- Collaboration for teams aligning on story, visuals, and production logic
- Export and pitch assets for moodboards, story documents, and production planning

WORKFLOW

- 01 Write the script
- 02 Structure the story
- 03 Define characters, locations, references, and visual rules
- 04 Generate or organize storyboard frames
- 05 Prepare production prompts and scene logic
- 06 Export, pitch, iterate, and produce

POSITIONING

Stop writing blind. See your story as you write it. ScreenWeaver is the missing production layer between the screenplay and AI video — a connected workspace for story, visuals, and production prompts.
